

ABSTRACT OF THE DISCLOSURE

- A bottle and bottle closure assembly for draining a solution contained within a bottle, the bottle closure assembly. The bottle has a base section, a body portion extending from the base and terminating into a neck
- 5 portion having an outlet through which the solution may pass. A seal is secured to the neck portion so as to cover the opening such that the seal will retain solution within the bottle. A cap member has rupture members designed to assist in the rupture of the seal.
